

EVERPOINT HOLDING

LOGISTICS · DATA ANALYTICS · BOOKKEEPING

COMPANY PROFILE

Moving goods. Making sense of numbers. Keeping the books straight.

An integrated services group delivering supply-chain execution, decision-grade analytics and disciplined financial record-keeping under one accountable roof.

01 — WHO WE ARE

A single, accountable partner for movement, measurement and money.

Ever Point Holding is a multi-disciplinary services group built on one simple premise: the three functions that decide whether a business thrives — **how it moves goods, how it reads its data, and how it keeps its books** — should not be fragmented across disconnected vendors.

Founded in 2014 and headquartered in New York, USA, we operate three specialist divisions that share one operating standard, one reporting language and one point of accountability. Our clients range from fast-growing SMEs and distributors to established manufacturers and public-sector suppliers.

The name was chosen deliberately. A **point** is a fixed reference — the place where separate lines meet and agree. That is what we offer: one point of contact, one point of accountability, and one point of truth shared by your operations, your data and your accounts.

02 — OUR DIRECTION

What we are here to do.

Our Mission

To give every client complete confidence in three things at once: that their goods arrive as promised, that their numbers are accurate, and that their decisions are grounded in evidence rather than guesswork.

Our Vision

To become USA's most trusted integrated operations partner — the group businesses turn to when precision, transparency and continuity matter more than the lowest quotation.

"Logistics moves the business. Analytics explains the business. Bookkeeping proves the business. We deliver all three — and we make them talk to each other."

Core Values

Integrity First

Accurate records, honest reporting and disclosure of problems early — never after the fact.

Precision

A shipment, a dataset and a ledger entry share one requirement: they must be exactly right.

Transparency

Clear pricing, traceable shipments, auditable books and reporting our clients can verify.

Reliability

Commitments are measured, tracked and reported against. We would rather promise less and deliver fully.

Confidentiality

Client data and financial information are handled under strict access control and non-disclosure.

Continuous Improvement

Every route, model and process is reviewed on a defined cycle and improved on evidence.

DIVISION I

Logistics & Supply Chain

Dependable movement of goods, planned around your delivery promise — not around our convenience.

Our logistics division manages the physical flow of goods from origin to final delivery, combining route planning, documentation, warehousing and last-mile execution. Every consignment is tracked, timestamped and reconciled, so the operational record and the financial record always agree.

SERVICE	WHAT IT COVERS
Freight Forwarding	Road, air and sea coordination, carrier selection, consolidation and rate negotiation.
Customs & Documentation	Clearance support, duty and tariff handling, compliant paperwork and record retention.
Warehousing & Inventory	Secure storage, stock counts, goods-in/goods-out control and inventory reconciliation.
Distribution & Last Mile	Scheduled delivery runs, proof-of-delivery capture and exception management.
Fleet & Route Planning	Load optimisation, routing, fuel and maintenance tracking, driver scheduling.
Supply Chain Advisory	Network review, supplier lead-time analysis and cost-to-serve reduction.

Tracked

Status visibility at every handover point, with documented exceptions.

Compliant

Documentation prepared to meet regulatory and audit requirements.

Reconciled

Every movement is matched to an invoice and a ledger entry.

Typical outcomes: reduced transit delays, fewer clearance hold-ups, lower cost-per-delivery and a clean, audit-ready paper trail from purchase order to proof of delivery.

DIVISION II

Data Analytics & Business Intelligence

We turn scattered operational and financial data into decisions you can defend.

Most organisations are not short of data — they are short of clarity. Our analytics division consolidates data from your operations, sales and accounting systems, cleans and validates it, and delivers it as dashboards and reports that answer specific business questions on a fixed schedule.

SERVICE	WHAT IT COVERS
Data Consolidation & Cleaning	Merging sources, removing duplicates, validating integrity and building a single source of truth.
Dashboards & Reporting	Live KPI dashboards plus scheduled weekly, monthly and board-level report packs.
Operational Analytics	Delivery performance, stock turnover, route cost, supplier reliability and capacity use.
Financial Analytics	Margin analysis, cash-flow trends, cost drivers, receivables ageing and budget variance.
Forecasting & Modelling	Demand forecasts, scenario planning and sensitivity models for major decisions.
Process Automation	Replacing manual spreadsheet routines with automated, repeatable reporting.

Questions our clients ask us to answer

"Which routes, products or customers are actually losing us money?"	"How much stock should we be holding — and where?"
"What will our cash position look like in 90 days?"	"Where exactly is the delay in our order-to-delivery cycle?"

DIVISION III

Bookkeeping & Financial Reporting

Books that are current, reconciled and ready for review at any time — not just at year end.

Our bookkeeping division maintains accurate, up-to-date financial records under a disciplined monthly close cycle. Work is performed by trained bookkeepers, reviewed independently before release, and delivered with a management report that explains what the numbers mean.

SERVICE	WHAT IT COVERS
Daily & Monthly Bookkeeping	Transaction capture, classification, general ledger maintenance and month-end close.
Bank & Account Reconciliation	Bank, cash, card, supplier and inter-company reconciliations with variance notes.
Accounts Payable & Receivable	Invoice processing, payment scheduling, credit control and debtor follow-up.
Payroll Support	Payroll processing, statutory deductions and payroll journal posting.
Management Accounts	Profit & loss, balance sheet, cash-flow statement and budget-vs-actual commentary.
Audit & Compliance Support	Year-end schedules, auditor liaison and organised, retrievable supporting documents.
Cloud Accounting Setup	System selection, chart-of-accounts design, migration and staff training.

Our monthly close discipline

Capture All transactions recorded and coded within the agreed cut-off window.	Reconcile Every control account reconciled and differences investigated, not carried forward.	Review & Report Independent review, then delivery of accounts with plain-language commentary.
---	---	---

06 — THE INTEGRATED ADVANTAGE

Why three divisions are stronger than three suppliers.

When logistics, analytics and bookkeeping sit inside one group, information stops getting lost between them. A delivery creates a data point; that data point feeds a dashboard; the same event lands correctly in the ledger. One version of events — operational, analytical and financial.

One Accountable Party

No finger-pointing between vendors. A single relationship manager owns the outcome across all services.

Clean Data by Default

Because we capture the operational data ourselves, the analytics and accounts are built on verified inputs.

Faster Month-End

Shipment, invoice and ledger records are reconciled continuously, so closing is a review — not a rescue.

Scales With You

Start with one division, add the others as you grow, without re-tendering or re-onboarding.

How we work with you

1

Discovery

We review your current operations, systems and records, and define the problems worth solving.

2

Proposal & Scope

A written scope with deliverables, service levels, timelines and transparent pricing — no hidden line items.

3

Onboarding

Systems set up, data migrated, controls agreed and responsibilities documented in a service schedule.

4

Delivery & Reporting

Day-to-day execution with agreed reporting rhythm: operational updates, dashboards and monthly accounts.

5

Review & Improve

Scheduled performance reviews against KPIs, with documented improvement actions.

07 — SECTORS WE SERVE

Trade & Distribution

Importers, wholesalers and FMCG distributors.

Manufacturing

Inbound materials, finished-goods flow and cost tracking.

Retail & E-commerce

Fulfilment, returns handling and margin reporting.

Construction & Projects

Site deliveries, project cost ledgers and job costing.

Agriculture & Commodities

Bulk movement, storage records and yield analytics.

NGOs & Public Sector

Grant-compliant records and donor-ready reporting.

Governance & Assurance

- Confidentiality — signed non-disclosure terms and role-based access to client records.
- Segregation of duties — preparation and review are always performed by different people.
- Data protection — encrypted storage, controlled backups and defined retention periods.
- Insurance & licensing —
- Professional standards — [accounting body](#)
